Some of the agreements we have with our client is that we are going to deliver a desktop application by the 27th of March and the website by 8th of May 2020.

Functional Requirements

Use case: Assigning employees to shifts

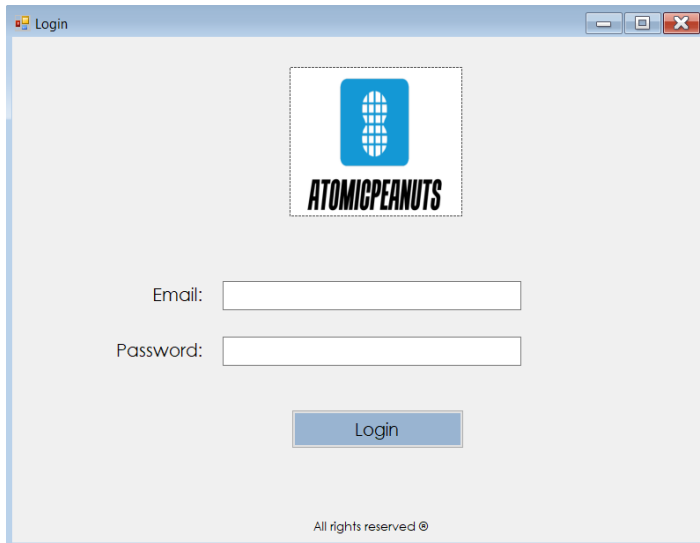

Actor: Manager

Main Success Scenario:

1. A manager clicks on an employee from the table.
2. Manager gets a message.
3. System opens a new form with employee information.
4. Manager selects time and date to from the dropdown list and calendar.
5. The system confirms that employee is assigned to shift.

Extensions:

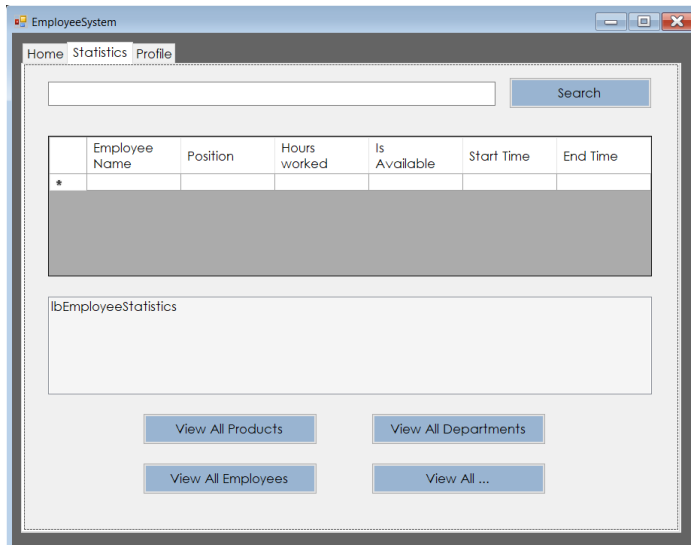

- 2a. Question to assign an employee
 1. Manager choose to assign an employee
 2. Manager choose to cancel the action.
 3. Return to MSS step 1.
- 4a. Form to assign employee
 1. If there's no data, the system will give an error.
 2. If the employee is not available, the system will suggest a reserved employee.
 3. If data is available and employee is assigned to a shift, the system will display message indicating success of the action.
 4. End of use case.

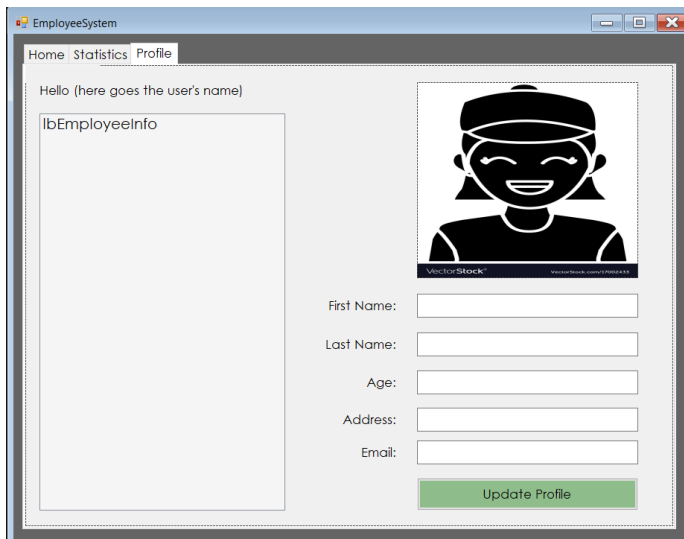

- Login page. User logs into the application with his/her credentials.

- After logging in, the user will get a schedule overview where they can view all work shifts. In this case, the user is an employee.

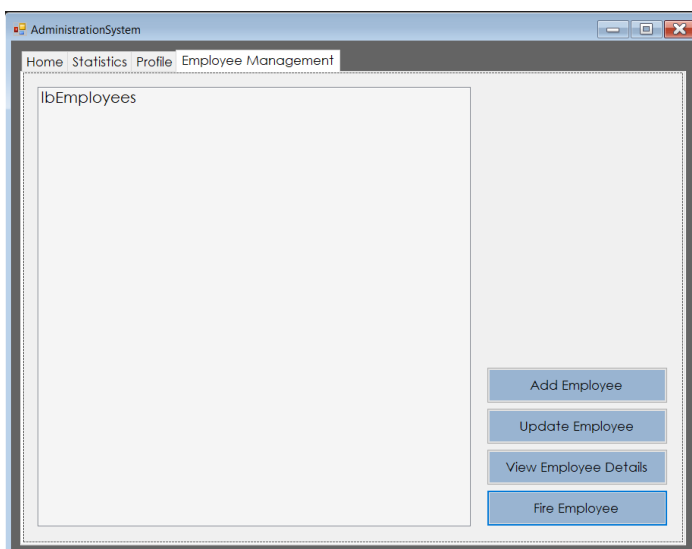

- The user (Employee or Manager) can choose to view the statistics by clicking the statistics tab.

- The user (Employee or Manager) can view their profile or choose to update personal information by filling in the textboxes and clicking update profile.

- After the manager logs in, they will get an overview of the schedule.
As manager, they would be able to view all work shifts or assign an employee to a shift.

- On the employee management page, the Manager can add, update, view or remove (in most cases fire) an employee.
